

On-site testing of the flight vehicle and payload conducted by the Prime Contactor.

Heuch Engineers can provide design, engineering and manufacturing services for prototype and production projects. Heuch can provide Engineering and Drafting capability utilizing a variety of current software products.

Recently Heuch provided engineering and manufacturing services to a Defence Industry Prime Contractor for the development of an on-board cooling system for suspended air-bourne test equipment.

The rigorous specification included 0% to 100% capacity control, minimal power consumption, shock load testing, operation at large tilt angles and variable ambient conditions.

The project required the development and manufacture of a variety of special components to meet the specified requirements.
