

HMAC Air Conditioners

Communication Shelters equipped with Heuch Refrigerated Air-conditioners.

The Heuch HMAC is a rugged unit; purpose built for application in extreme and remote environments where quality, efficiency and reliability is a fundamental requirement.

The HMAC series are produced in a variety of cooling/heating capacities from 2.0 kW to 50 kW to suit both free discharge and ducted arrangements.

The specific advantages of this range include:

- ❁ Light weight welded aluminium chassis and Access Panels
- ❁ Unloading refrigeration system for continuous operation
- ❁ Modular construction
- ❁ High Efficiency Heat-exchangers
- ❁ High Volume Air circulation fans suitable for ducted connections

The HMAC series can be configured upon request in single or multiple zones, one piece or as a split system.

The HMAC series units can also have a cooling unloading capability built into the system allowing the refrigeration system to run continuously once cooling is selected. This assists in the reduction of transient power fluctuations caused by the stopping and starting of the compressor motors.
